PRODUCT DESCRIPTION

Water based extra fine polish used to deliver extreme gloss and protection, as well remove extra light scratches.

PAICAR 04 has been developed as a very final step to achieve an outstanding and glorious gloss, while offering the protection of a wax. It contains a specific mix of polishing and waxing agents, which power the gloss and protect the surface from weathering.

PAICAR 04 has been developed to give its best in combination with a rotorbital polishing machine and DA-04 green soft foam pad. It can be applied by hand as well, using Silky Double microfiber cloth.

TIPS

- ▶ Clean surface thoroughly before polishing
- ▶ Shake well before use
- ▶ Apply a small amount of compound
- ▶ Polish with crossed movements: left to right, up and down
- ▶ Use rotorbital polisher for better finish
- ▶ Use DA-04 Green soft polishing pad
- ▶ Apply low pressure and let the compound works on its own
- ▶ If hand-use, Silky Double microfiber cloth can be used
- ▶ Use a clean Silky Tech microfiber to wipe off without too much pressure

HOW TO USE

Apply a small quantity of PAICAR 04 on DA-04 green soft foam pad and use the pad for spreading the compound on the surface. Select a rotorbital polisher and start at low RPM, then gradually increase revolutions and polish with crossed movements, namely left to right, up and down. Wipe the surface with a clean Silky Tech microfiber cloth, in order to remove any potential residue. PAICAR 04 may be used also by hand: in this case, select a clean Silky Double microfiber cloth and use one side to apply it, and the softer side to wipe it off.
